TSCM SERVICES

Confidential, Professional and Dependable

Despite the laws designed to protect against this type of invasion, almost anyone can easily and cheaply acquire surveillance devices, or "bugs," that can be used to invade your privacy and intercept valuable information. Our dependable, discreet and highly professional Technical Surveillance Countermeasures (TSCM) inspections, or bug sweeps, help individuals and businesses protect their privacy and confidential information.

Given the complexity of today's threats, it is essential to use highly trained, qualified technicians. We use state-of-the-art devices to perform frequency spectrum analysis and other technical searches. These techniques cover the entire usable frequency spectrum and can even find bugs that are inactive or turned off. The area is also physically inspected thoroughly to detect covert devices. Our technicians are some of the most highly trained specialists in the world, most with former federal agency training and experience.

Whether the concern is a corporate office, a private residence, a vehicle or a vessel, our technicians can help you regain your sense of privacy and security.

TSCM services: ***Bug sweeps & counter-surveillance***

- Corporate counter-espionage
- Residential and domestic issues
- Wiretap and bug detection
- Counter-surveillance
- Electronic surveillance detection
- Covert video device detection
- Audio recording or transmitting devices
- Vehicle tracking devices (GPS)
- Listening device detection
- Hidden camera detection

What sets us apart?
Our business is to keep yours private

- Experienced and highly trained technicians
- Rapid response anywhere in the continental US, with international capability
- An industry-leading suite of equipment

LASORSA & ASSOCIATES

COUNTER SURVEILLANCE

What is your information worth to you? ...To your competition?

Exposures and uncertainty diminish your sense of security in the places where you should feel most secure, like your home or office. Threat devices are cheap and available, and they could be ruining your privacy or exposing your business.

Our technicians can find any illegal eavesdropping or video device, as well as any intelligence intercept device on any piece of equipment or mobile device. National and international services are available.

TSCM inspections *are usually conducted because of:*

- Suspicion that business or personal conversations are being intercepted
- Suspicion of a listening device
- Noise on the telephone lines
- Unsolicited telephone repair visits
- Information leaks
- Evidence left behind by burglars or intruders
- Domestic or business problems

Expert Witness

Joe LaSorsa testified as an expert witness on technical surveillance during a congressional hearing.

Initial consultations are always discreet, personal and free.

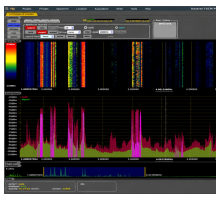
TSCM EQUIPMENT

An Industry-Leading Suite of Equipment

We maintain a best-in-class line of the most professional TSCM equipment available. From Research Electronics International, that includes the OSCOR Max portable spectrum analyzer (10 kHz to 43 GHz), the MESA 2.0 handheld spectrum analyzer, the TALAN telephone analyzer, the ORION non-linear junction detector and the ANDRE advanced near-field detection receiver. We also run Kestrel TSCM Professional Software for software-defined radio spectrum analysis, along with FLIR thermal imagery tools, the Cellbusters Zone Protector, the Fluke Wi-Fi AirCheck, the Cellebrite UFED and more.

OSCOR Max
43 GHz spectrum analyzer

MESA 2.0
Handheld spectrum analyzer



Kestrel TSCM
Professional SDR spectrum software

TALAN
Telephone analyzer

ORION
Non-linear junction detector

ANDRE
Near-field detection receiver

FLIR
Thermal imagery

Cellbusters Zone Protector
Cell phone detector

Fluke Wi-Fi AirCheck
Wi-Fi analyzer

Cellebrite UFED
Mobile device extraction

Our TSCM toolkit: *Full-spectrum capability*

- Frequency spectrum analyzer
- Ultra-sensitive VLF/UHF/IR probe
- Field strength meter
- Telephone line analyzer
- Wireless camera/video receiver and interceptor
- GSM (cell phone), Wi-Fi and Bluetooth detector
- IR/thermal imagery equipment
- Non-linear junction detector/evaluator
- Network protocol analyzer
- Black light/UV light inspection equipment
- Multi-meter and outlet tester
- Borescope and other physical inspection tools
