TSCM SERVICES

Confidential, Professional and Dependable

In today's world despite the laws designed to protect from this type of invasion, almost anyone can easily and cheaply acquire surveillance devices or bugs that can be used to invade your privacy and intercept valuable information. Our dependable, discreet and highly professional Technical Surveillance Countermeasures (TSCM) or bug sweeps can help individuals and businesses protect their privacy and confidential information.

Given the complexity of today's threats, it is essential to use highly trained, qualified technicians. We utilize state-of-the-art devices to perform frequency spectrum analysis and other technical searches. These search techniques cover the entire usable frequency spectrum and can even find bugs that are inactive or turned off. In addition, the area will be physically inspected thoroughly to detect covert devices. Our technicians are some of the most highly trained specialists in the world, most with former federal agency training and experience.

What Sets Us Apart?

- Experienced and highly trained technicians
- Rapid response anywhere in the continental US with international capability
- Our business is to keep yours private
- Industry leading suite of equipment
